# Disparities in Globalization of the World Economies\*

SK MISHRA AND BINOD KUMAR\*\*

#### **Abstract**

This paper constructs composite indices of globalization of 131 countries spread over the five continents and classified into World-I, World-II and World-III countries. KOF (or Konjunkturforschungsstelle), the Business Cycle Research Institute in the Swiss Federal Institute of Technology, Zurich is the source of data used in this study. The Composite Indices of Globalization have been computed by Pena's method, which attributes the most desirable properties to the indices so constructed. On the basis of these indices, the paper investigates into the trends of globalization and disparities in globalization for a period of 11 years (1999-2009). Disparities have been obtained as the Gini's coefficient as well as the coefficient of variation. The study finds that in all the three worlds, the trends in globalization are increasing while the trends in the disparities in globalization are decreasing, which suggest global integration and convergence of national economies to a global order. We also find that social indicators of globalization explain the variations in per capita income more potently than economic or political indicators of globalization do.

**Keywords:** Globalization, composite index, disparities, global integration, convergence.

#### I. Introduction

lobalization is the process of integration of economies and societies all over the world permitting international flow of people, culture, knowledge, technology, finance and physical resources as well as evolution of the communication system and political relations among the nations that facilitate such flow. It is the "process of creating networks of

<sup>\*</sup>This paper is the revised version of the the paper presented in the Indian Regional Science Association Conference on "Regional Development Issues: Disparities and Conflicts" at MG Kashi Vidyapith, Varanasi, December 20-21, 2012.

<sup>\*\*</sup>SK Mishra teaches Economics in North-Eastern Hill University, Shillong. Binod Kumar is Associate Town Planner, working in Town and Country Planning Department, Faizabad, UP.

connections among actors at multi-continental distances, mediated through a variety of flows including people, information and ideas, capital and goods. Globalization is conceptualized as a process that erodes national boundaries, integrates national economies, cultures, technologies and governance and produces complex relations of mutual interdependence" (Dreher, 2006). The decision of a nation (or the government of that nation) to integrate herself in the globalization process is political, though such a decision may be an outcome of various apolitical forces. In action, such decisions, however, are reflected in breaking down of trade barriers or protective barriers such as tariffs and quotas, standardization of international economic laws and policies, establishment of embassies, rationalization of the policies on international communication and human migration, and promotion of a cosmopolitan culture.

While science & technology and the desire (or need) to manage the society on the principles of exchange (Boulding, 1973) or the market economy have been the most powerful force to promote globalization, geographical barriers, ethnic differences, plurality in the belief system as to management of economies and societies, injustice, drive of the some to dominate over the others, ill effects of an incompetent governance of socioeconomic processes, etc. have been the forces that restrict it. Globalization is necessarily a process leading to homogenization which has both plus and minus sides. An inability to balance the two restricts the scope of globalization. From the economic viewpoint globalization may contribute to economic growth through spread effect, increased specialization and appropriation of comparative advantages (Bhagwati, 2004), but if the process is not managed properly, it may induce back-wash effect and adverse social consequences (Bauman, 1998).

## II. Globalization in a Historical Perspective

After the World War II the countries of the world were divided into two blocs, the World-I and the World-II. In World-I are the capitalist, industrial, developed countries, most of which have been highly advanced economies, wield greatest influence, enjoy highest standards of living, and are equipped with greatest technology - such as Australia, Austria, Belgium, Canada, Denmark, Finland, France, Greece, Iceland, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Singapore, South Korea, Spain, Sweden, Switzerland, Taiwan, Turkey, UK, USA, West Germany, etc. In World-II were the countries that supported the socialistic or communist philosophy – mostly from Eastern Europe the countries such as Albania, Bulgaria, Czechoslovakia, Hungary, Poland, Romania, Soviet Union (USSR,

Ukraine, Belarus, Uzbekistan, Kazakhstan, Georgia, Azerbaijan, Lithuania, Moldova, Latvia, Kirghizstan, Tajikistan, Armenia, Turkmenistan, and Estonia), Yugoslavia, etc. The countries that were neither aligned to capitalism and NATO nor did they ascribe to the communist philosophy (remained nonaligned to the Soviet Union) were classified into the World-III. Some economists (Manuel and Possums, 1974) further classify the poor, marginal countries having primitive economies into the sub-class of the World-IV countries. The World-III countries included most of Africa, Asia and Latin America and characterized primitive to less developed (developing) economies. Rostow (1960) argued that the World-III countries have mostly not yet reached the stage of 'take off' and, therefore, foreign aid was needed to help kick start industrialization and economic growth in those countries. Such an aid was also politically appropriate to lure the World-III countries to revolve around the World-I countries and keep a safe distance from the World-II countries. In matters of foreign aid, most of the development economists in the 1950s through 1970s were almost unanimous. According to Bauer (1981), therefore, the World-III countries have been very much prone to solicit and receive Western aid.

The division of countries on the planet into the three sub-worlds (World-I, World-II and World-III) was an event that found its origin in international power politics, which continued for over 40 years as the Cold War between the Eastern and the Western Blocs. The World-III countries continued to be the 'objects to acquire' for the two blocs, aiming at which political, social, economic and strategic policies were designed by both the blocs according to their suitability. This Cold War proved to be the greatest barrier to globalization. However, the cold war lost its vigour in the last decade of the 20<sup>th</sup> century on account of two historical forces; disintegration of the Soviet Union and international indebtedness of the World-III countries.

Disintegration of the Soviet Union: On account of many forces that weakened the Eastern Bloc, the Union of Soviet Socialist Republics (USSR) finally disintegrated in the end of 1991. The USSR economy rested on the state ownership of means of production, centralized economic and administrative planning, and undue favor to manufacturing of armaments and heavy capital goods at the cost of light capital goods, consumer durables and the consumer goods in general. Due to dictatorial and repressive tendencies of the government, the feedback system that could help formulate efficient plans remained underdeveloped, which led to overproduction of some goods on the one hand and underproduction of other goods at the other,

leading to wastage and shortage. Inefficiency, corruption, supply and use of false information, black marketing, etc weakened the soviet economy, leading to its stagnation. In the 1980s, Mikhail Gorvachev went in for liberalization to address the economic stagnation. Liberalization led to the emergence of long-repressed nationalist movements and ethnic disputes within the diverse republics of the Soviet Union. Ultimately, the constituent members of the union resolved to dissolve the USSR. This disintegration paved the way to globalization of the countries in World-II and World-III (Khan, 2009).

#### International Indebtedness and Insolvency of the World-III Countries:

Most of the World-III countries (such as Afghanistan, Benin, Bolivia, Burkina Faso, Burundi, Cameroon, Central African Republic, Chad, Republic of the Congo, Comoros, Ethiopia, Gambia, Ghana, Guinea, Guinea-Bissau, Guyana, Haiti, Honduras, Ivory Coast, Liberia, Madagascar, Malawi, Mali, Mauritania, Mozambique, Nicaragua, Niger, Rwanda, São Tomé and Príncipe, Senegal, Sierra Leone, Tanzania, Togo, Uganda, Zambia, etc) have been heavily indebted (to the extent of insolvency and debt overhang) to the international funding organizations and World-I countries. Some of them chose to be indebted in the name of promoting development although the funds borrowed to the said end were mismanaged and lost to corruption. In other cases, the funds were borrowed for the arms race. In some other cases, a heavy burden of debt was a legacy of colonialism, the result of the transfer of debts of the colonizing nations to those countries. In yet other cases they had a heavy burden of odious debt (Sack, 1929; Howse, 2007). In several developing economies, heavy international debt has led to economic crisis. In some others, structural adjustment is thrust upon them resulting into deformed public expenditure. In case of many countries, therefore, globalization was a result of economic arm-twisting.

## III. Quantification of the Extent of Globalization

It is generally agreed that a composite index of globalization can be constructed by synthesizing many indicators of globalization, each representing a particular aspect, so as to compare different countries as to the extent of globalization attained by them. Several indices of the extent of globalization have been suggested, all of which are based on different formulas of synthesis of the indicators of different aspects of globalization, but the KOF index of globalization is considered to be the most comprehensive one (Samimi, et al., 2012).

**The KOF Index of Globalization**: As summarized by Mishra (2012), Business Cycle Research Institute KOF in the Swiss Federal Institute of

Technology (ETH or Eidgenössische Technische Hochschule), Zurich has, since 2002, been compiling a vast information on different aspects of globalization and constructing the KOF Index of Globalization, year-wise, for a very large number of countries (KOF, 2012). The KOF Index of Globalization synthesizes three aspects of globalization, viz. economic, social and political. Under economic globalization, actual economic flows (such as trans-border trade, direct investment and portfolio investment, ECO-1) and restrictions on trans-border trade as well as capital movement by means of taxation, tariff, etc (ECO-2) are included. In social globalization, transborder personal contacts (degree of tourism, telecom traffic, postal interactions, etc, SOC-1), flow of information (SOC-2) and cultural proximity (SOC-3) are included. The political globalization (POL-1) includes the number of embassies and high commissions in a country, membership of international organizations, participation in UN peace missions, and the treaties signed between two or more states (Dreher, 2006; Dreher et al., 2008). The three sub-indices (economic, social and political) are constructed by the method of the Principal Component Analysis (PCA) so that the sub-indices explain the maximum possible variation in the data. At the subsequent level, the three sub-indices are synthesized into the overall index of globalization using the PCA. Thus, methodologically, the KOF Index of Globalization is an application of the Principal Component Analysis at two stages.

## IV. Objectives and Methodology of the Present Study

This study aims at, first, constructing the composite index of globalization by a methodology different from the KOF and secondly to investigate how, in the recent years, the extent of globalization has been distributed over the regions. We have used the KOF data (available at KOF, 2012) for 131 countries and 11 years, 1999-2009, distributed over Asia, Europe, America, Africa and Australia, and classified into the three worlds – World-I, World-II and World-III. Thus, in this study we are concerned with the economic rather than the geographical regions.

The Method of Aggregation: It has been pointed out that, methodologically, the KOF index of globalization uses the PCA at two levels. This approach has two limitations; first that it is inefficient since it neglects the information on covariance (or correlation) among the constituent variables comprising the three aspects of globalization, viz. economic, social and political, and secondly that it is inconsistent because at the first stage of aggregation it presumes independence among the constituent variables across the different

aspects of globalization, but subsequently, at the second stage of aggregation, it considers the three aspects of globalization interdependent (Mishra, 2012). In the present study, we have used Pena's method of constructing the composite indices, applied on the pooled data (11 years) of all the constituent variables at one go.

Pena's method of construction of synthetic indicator is based on Pena's P2-distance (DP2) defined as

$$Z_i = DP2_i = \sum_{j=1}^{n} \left[ \left( \frac{d_{ij}}{\sigma_j} \right) (1 - R_{j,j-1,-1}^2) \right], i = 1, 2, ..., n$$
 (1)

where i=1,2,...,n are cases (i.e. countries); m is the number of constituent variables, X, such that  $x_j \in X, i=1,2,...,n, j=1,2,...,m$ ;  $d_y = \begin{bmatrix} x_y - x_y \\ z \end{bmatrix}, i=1,2,...,n, j=1,2,...,m$ ; n is the reference case,  $\mathcal{O}_j$  is the standard deviation of variable j;  $R_{j,j+1,...,1}^2$ , j > 1 is the coefficient of determination in the regression of  $x_j$  over  $x_{j-1}, x_{j-2},...,x_1$ . Moreover,  $R_1^2 = 0$ . A synthetic indicator  $(Z = X_W)$  constructed by Pena's method is claimed to have almost all desirable properties (Somarriba & Pena, 2009; Montero et al., 2010, Garcia et al., 2010). An iterative method (Montero et al., 2010) is used to synthesize the constituent variables into the synthetic (composite) indicator A FORTRAN source code for the said iterative method (for cardinal and ordinal constituent variables) is free downloadable from <a href="http://nehu-economics.info/pena-synthetic-index.html">http://nehu-economics.info/pena-synthetic-index.html</a>

The Measure of Disparity. The present study uses Gini's coefficient of variation as a measure of disparity. Gini's coefficient is computed by the formula:

$$[1/\bar{x}][(1/(2n^2))\sum_{i=1}^{n}\sum_{j=1}^{n}|x_i-x_j|^{\alpha}]^{(V\alpha)}$$
 ... (2)

The formula in (2) is called Gmi's coefficient (of variation) for  $\alpha = 1$ . For  $\alpha = 2$  it is called the coefficient of variation (CV). As usual,  $\overline{\chi} = (1/n) \sum_{i=1}^{n} x_i$ ) is the arithmetic mean of  $\chi$ 

#### V. The Findings

It has been found that among the indicators of globalization trans-border trade, direct investment and portfolio investment (ECO-1) obtains the largest weight. Indicator of political globalization incorporating the number of embassies and high commissions in a country, membership of international

organizations, participation in UN peace missions, and the treaties signed between two or more states (POL-1) obtains the second largest weight followed by cultural proximity (SOC-3) and restrictions on trans-border trade as well as capital movement by means of taxation, tariff, etc (ECO-2). Next, trans-border personal contacts such as degree of tourism, telecom traffic, postal interactions, etc, (SOC-1) and flow of information (SOC-2) follow the suit. The correlation coefficients of the composite index of globalization (Z) with the constituent indicators, however, do not reciprocate to the weights obtained by the latter. SOC-2 has the largest correlation followed by SOC-3, ECO-2, SOC-1 and ECO-1. The smallest correlation has been exhibited by POL-1.

Table-1: Weights obtained by the Constituent Variables										
and their Correlation with the Composite Index of Globalization										
Indicators of Globalization	ECO-1	ECO-2	SOC-1	SOC-2	SOC-3	POL-1				
Weights obtained by the Indicators	1.00000	0.48221	0.37849	0.34943	0.54400	0.65190				
Relative weights (sum = 1.00)	0.29360	0.14158	0.11112	0.10259	0.15972	0.19140				
Correlation with Composite Index	0.69612	0.83876	0.81560	0.91353	0.86174	0.54417				

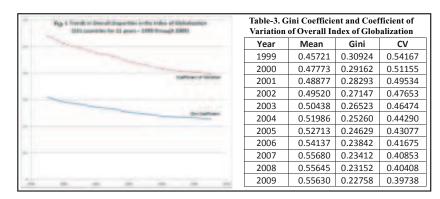

The standardized composite indices ( $Z^* = (Z - Z_{\min})/(Z_{\max} - Z_{\min})$ ) for globalization (for 131 countries and 11 years, 1999 through 2009) are presented in Table-2. The countries are arranged in the descending order of the magnitude of numerically measured index of globalization in the base year 1999.

**Trends in Overall Disparities in Globalization**: We observe (Fig-1, Table-3) that the disparities in the overall levels of globalization (in 131 countries) are gradually decreasing over time and signifies the tendency to convergence (Fig.-1).

Trends in World-wise Disparities in Globalization: The mean levels of globalization in all the three worlds are increasing (Fig.2, Table-4), though the rate of globalization is faster in the World-II. It may also be noted that especially after 2006 stagnation is observed. The stagnation is observed in case of World-I and World-III, too. This slow-down may be attributed to the world economic crisis (Chinn, 2011).

Disparities in the level of globalization in the World-I are decreasing, but, especially in case of the World-III disparities are declining faster than in the other two worlds. The countries of the erstwhile World-II have gone in for globalization more vigorously.

Relationship between Globalization and Per Capita Income: Fig.-4 presents the relationship between per capita GDP (in US Dollars) and the Index of globalization in 2009. It is interesting to note (Table-6) that when Ln[PCGDP(USD)] is regressed on the (aspect-wise) KOF Indicators of Globalization (ECO-1, ECO-2, SOC-1, SOC-2, SOC-3, POL-1, presented in Table-5) for the year 2009, we find that SOC-1 and SOC-3 are the most influential indicators, followed by SOC-2. Economic indicators (ECO-1 and ECO-2) are rather poor and POL-1 is negligible at explaining the variations in per capita income.

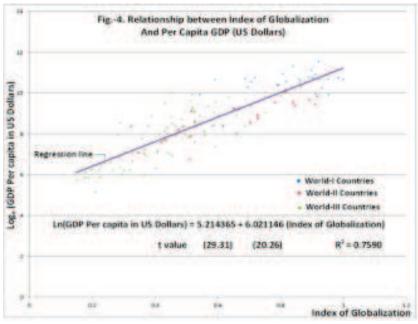

Table	Table-5. Aspect-wise KOF Indicators of Globalaization and Per Capita GDP in Different Countries, 2009

Relationship between Globalization and Income Inequality: In Fig.-5 we present the relationship between the composite index of globalization (2009) and the income inequality (measured as the natural logarithm of the Gini coefficient of income distribution) in the countries under study. Unfortunately, the data for inequality in income distribution are not available consistently for any year. We have assumed, therefore, that the measures of income inequality (reported by the World Bank and some other organizations) available for the latest year (mostly for 2006-2009, but a few over a decade old) may serve as a proxy. With this limitation we regress the log<sub>e</sub>(Gini coefficient of income distribution) on the index of globalization-2009. The data have two outliers, namely USA and Luxembourg. So we have used the *Least Absolute Deviation* (LAD) *Regression*. We find that the level of globalization is (inversely) correlated with the inequality in income distribution and the

# VI. Concluding Remarks

Globalization became a buzzword as well as the only path to economic survival of the countries in the World-II, especially after the dissolution of the Soviet Union. The countries under the influence of the USSR also had to choose globalization as the only available path. The World-III countries that were colonies of the developed nations before their independence had a natural inclination to go in for globalization, especially to cope up with their needs of international financial assistance and the ever-increasing burden of international debt. For example, India, that claimed to have a faith in the 'socialistic pattern of society' but hatched capitalism in disguise (Jha, 1963), hurriedly opted for economic reforms leading to liberalization and globalization (Mishra, 2012). China that claims to be a socialistic economy has been taking progressively active steps in this direction to become a highly attractive destination to large foreign direct investment (Chen, 2011). They realized that technological progress, accessibility to financial assistance and expansion of trade depended on their choosing the path to globalization. The World-I countries also have a need to expand their markets, seek a source of cheaper manpower by outsourcing and expand the domain of multinational corporation as well as

to maintain their dominance in the world politico-economic sphere. This mutual need paved the way to world-wide globalization especially in the post-1990 years.

Consequently we observe the increasing trends in globalization of the World-II and World-III countries. The tendencies to integration, convergence to the world economic order and decrease in the disparities in the level of globalization are clearly discernible. Viewed differently, it is also a triumph of capitalism over the alternative philosophy of socialism. But, it has also shown that crisis in the World-I countries may easily percolate to the World-II and World-III countries. There is another subtle point in the world-wide acceptance of globalization as the only road to economic development (of the world-II and World-III) countries. It is inherent in the philosophy of globalization which indirectly suggests that the poor are the helpless victims of their environment or, in other words, poor people are at the mercy of external forces and thus without wills of their own. Such an implicite suggestion implies that the poor people are without the primary human characteristic of responsibility. Poverty is thus a condition caused by external forces and not by personal conduct. It also implies, therefore, that economic achievement does not depend so much on the institutional framework incorporating people's attributes, attitudes, motivations, mores and political arrangements (Bauer, 1981). These implicit suggestions of prescribing globalization as the only road to development have fundamental and long run implication as to the future of the World-II and the World-III countries.
